

# Stage Requirements

**\*This is a sample diagram showing theater seating for 275 people. When seating audiences at round tables, the center aisle is not necessary. Alternate room setups including classroom seating, chevron seating and off center aisles are also acceptable.**

In order to deliver a presentation for your group with the greatest possible impact, Dan asks that you coordinate with the performance venue to provide the following:

1. Wireless lavalier microphone
2. Hollow podium, suitable for the storage of Dan's props
3. CD player
4. Ceiling height of at least 12 feet
5. Dan will need to trigger a blackout (all lights completely off) during his presentation. He can do this himself if the controls are within reach, or Dan will need someone to turn the lights off on his cue.
6. Please provide a riser measuring 32 feet wide by 12 feet deep, preferably set on the longer side of a rectangular room. The riser ensures safety and visibility for Dan's tumbling entrance and other demonstrations.
7. Please set the first row of chairs six feet from the front of the stage.

**Please contact Dan regarding any concerns, deviations or questions about these items.**
